Adobe Illustrator CS5 v15.0.2 Lite Portable.Zip .A novel approach to screen tyrosyl hydroxylase inhibitors from a chemical library. Tyrosyl hydroxylase (TyrOHase) is an enzyme that catalyzes the formation of tyrosyl residues on α -tubulin. In this study, we aimed to identify a potent TyrOHase inhibitor from a chemical library. We employed an integrative in silico/in vitro screening protocol including molecular docking, toxicological assay, cell-free assay, and cellular assay to explore in detail the characteristics of the potential inhibitors. Docking was performed on TyrOHase to evaluate the predicted binding energy. Cell-free assay was performed to investigate the inhibition of TyrOHase by a chemical library. The toxicity was assessed in HepG2 cells by CellTiter-Glo assay. The cells were exposed to a chemical library for 24 h and the activity of cellular TyrOHase was assessed by Western blotting. The chemical library consisted of 1242 compounds. We found that two compounds of the chemical library showed a high affinity to TyrOHase in docking and inhibition analysis. Importantly, two compounds had good cell tolerance and cellular activity. These compounds were selected as the positive hits. Only two compounds were predicted to be strong inhibitors of TyrOHase by a computational method. Nevertheless, they had a good cell tolerance and good cellular activity. The experimental results suggested that compounds were not predicted as strong TyrOHase inhibitors. We found that the inhibition of a compound on cell viability was not correlated with its inhibitory activity on TyrOHase. In silico/in vitro screening combined with in vivo assays provides promising compounds to inhibit TyrOHase. This method can be applied to predict the activities of chemical libraries for other targets. I have always been a fan of the authors of Letters from Saint John, so I was thrilled when I saw that Greg Tilford was at last coming to develop a screenplay, adapting another of their works, 2001. I'd had the good fortune to see the premiere of his The Wonder of It All while it was touring through the UK before it opened in the West End. I am indebted to John Warburton, the original director, for his stellar performance in the role. His intelligent, beautifully observed direction and thoughtful use of music and art have impressed me greatly. I was hugely impressed by 2001's journey to the screen. The film is a

Adobe Illustrator CS5.5 LiTE Portable.1. Field of the Invention This invention relates to a refrigerator, and more particularly to a refrigerator capable of reducing noise generated at a discharge unit thereof. 2. Background of the Invention Referring to FIG. 1, a conventional refrigerator has a refrigerating compartment 10 and a freezing compartment 20 arranged therein. An opening 22 is provided at a rear side of the freezing compartment 20, through which refrigerated air is discharged out of the freezing compartment 20. In general, a discharge duct for discharging the refrigerated air is formed outside the opening 22, and the refrigerated air is discharged out of the discharge duct through a duct hole provided at the opening 22. The above refrigerator is provided with a guide member 30 for guiding the air to the discharge duct. The guide member 30 is fixed to the opening 22 in a manner such that the guide member 30 is firmly attached at the opening 22. In the conventional refrigerator, the guide member 30 is in direct contact with the opening 22. Thus, in a case where the discharge duct is provided inside the opening 22, the refrigerated air is in direct contact with the guide member 30, thereby deteriorating the cooling efficiency of the refrigerated air. Also, when air of high temperature and high humidity is guided to the discharge duct, condensation of the air occurs, thereby leading to an increase in noise generated. It is an object of the present invention to provide a refrigerator capable of reducing noise generated at a discharge unit. To achieve the above object, there is provided a refrigerator comprising: a freezing compartment having an opening and a discharge duct connected to the opening; a refrigerating compartment arranged above the freezing compartment; an air-conditioning unit for discharging cold air to the refrigerating compartment; and a driving motor for driving the air-conditioning unit. A first opening is formed at a rear portion of the refrigerating compartment, and a second opening is formed at a front portion of the freezing compartment. The discharge duct has a guide member for guiding air therethrough, and the guide member is formed with a hole for discharging the cold air therethrough. The guide member is detachably installed to the first opening. Preferably, the guide member has a fixing portion integrally formed with an upper portion thereof and detachably fixed to the first opening. Further, preferably, the guide member is formed with a protrusion protruding at a position corresponding to a position at which the second opening is formed. 595f342e71
