Photoshop was first released in 1993. It was initially limited to Macintosh users. In its early years, Photoshop was criticized for poor performance, especially on Windows. Nowadays, Photoshop runs fast on both Macintosh and Windows, though it is still often the more expensive option for those looking for a photo editing program.

1. Field of the Invention This invention relates to a distance measuring apparatus for measuring a distance to a target object by transmitting a modulated wave signal, such as a laser beam signal, from a light source device, such as a laser oscillator, to the target object and detecting the signal reflected by the target object.

2. Description of the Related Art In recent years, laser distance measuring apparatuses for measuring a distance to an object by radiating a modulated wave signal (laser beam signal) from a light source device, such as a laser oscillator, to the object and receiving the signal reflected by the object have been used. In such a laser distance measuring apparatus, since, due to an environmental noise or the like, the signal reflected by the object becomes weak, the received signal needs to be amplified to a large level before it is processed, so that the signal can be detected when the signal reflected by the object becomes weak. As such a method for amplifying a weak signal, there has been known a method of using a microwave circuit. The microwave circuit is a circuit for receiving a modulated wave signal by a circuit having an amplifier circuit and then amplifying it. However, in the case of the microwave circuit, there have been problems that equipment for manufacturing the microwave circuit is expensive and loss occurs in the circuit due to the use of the microwave. For this reason, as a method for amplifying a weak signal without using a microwave circuit, there has been known a method of using a laser amplifier, such as an optical amplifier, which amplifies a modulated wave signal by amplifying the modulated wave signal using a laser beam. Such an optical amplifier is a device for generating an optical gain by applying an optical signal to a laser oscillator and then amplifying it by a nonlinear optical effect. As such an optical amplifier, for example, there have been known an optical amplifier using a two-photon absorption process (two-photon amplification) by one photon of an injected signal and one photon of a pump beam, an optical amplifier using four-photon absorption (four-photon amplification) by four photons of an injected signal and two photons
